- Dividing walls
- Wall coverings
- Office partitions
- Shower & bath enclosures
- Interior & exterior doors
- Windows
- Balustrades & railings
- Flooring & stairs
- Curtain walls
- Displays & shelving
- Custom applications

MiMatte has unique decorative qualities. It is used as an aesthetic element and is useful in the design of architectural glass partitions, glass doors, furniture fills, and other decorative items. MiMatte can be used in limitless ways in interior design. We own a very broad set of designs and execute customer orders based on their own, often personally – inspired requests. Intriguing ideas come to fruition with the combination of deep etching combined with other glass treatment processes—screen printing, OcuMatte, and color. The matte image and its opacity are adjustable depending on the use of the glass. Frosted glass parameters are precisely determined and controlled using the most modern equipment. We have the ability to chemically modify the glass without rollers, lasers, or sandblasters in small or large-scale sheets and quantities. Our company and plant are located in Michigan, making us the only acid-etched glass company in the U.S. For more information on these and other options, please Brad Aldrich at any time.
